

## Profit from Our Partnership

Welcome to the ultimate value in any feed you need... Venture Milling®, a subsidiary of Perdue®.

Venture Milling now combines its expertise in protein technology and ingredient sourcing with the vast experience and resources of Perdue to personally evaluate your farm's unique challenges and to deliver a package of products and commodities that provide the optimum nutritional value for your dairy operation.

## More Experience

Trust Venture Milling's unique understanding and know-how, backed by the substantial resources of Perdue, to provide all the feed you'll ever need.

Since Perdue first delivered feed in 1953, generations of farmers have depended on the company for accurate formulations with quality ingredients. As Perdue has grown, our

grain acquisition, logistics, and feed manufacturing capabilities have grown as well. Our two soybean meal plants produce 875,000 tons of SBM per year. We

handle 225 million bushels of corn, soybeans, milo, and barley annually. That's enough to fill a train of railroad cars 740 miles long – more than the driving distance from New York City to Indianapolis. The company also maintains 40 grain locations plus an ocean port in Chesapeake, VA, providing the ingredients necessary to produce 80,000 tons of feed weekly through a total of 14 mills. Big volume means big savings for you.

to Deliver More*

## More Expertise

Venture Milling works with your nutritionist to provide concentrates, complete feeds, and commodities designed to promote optimum milk and component production at the lowest possible cost.

By sponsoring groundbreaking university research, Venture Milling pioneered methodologies for measuring protein fractions

and protein availability for ingredients used in dairy rations.

Our cutting edge experience led to our revolutionary ProvAAAL® product, which offers extremely consistent, highly concentrated, and balanced amino acid nutrition for dairy cows.

With nutritional advice and support available from Venture Milling, your nutritionist can be assured that the ProvAAAL® technology will be incorporated into formulations geared specifically for your dairy and into rations that meet the requirements of each of your cow groups.

## More Nutritional Value

Perdue's buying power and transportation infrastructure deliver large-scale cost savings, while Venture Milling's dairy expertise adds substantial long-term profitability to any dairy situation.

Venture Milling offers a product line that gives you flexibility to reach your dairy's goals regardless of economic climate at the moment. When dairy economics demand maximum milk and component

yield from your herd, ProvAAAL® can help you reach that goal. Venture Milling's broad portfolio of ingredients and protein blends

are an economical option when a more conservative nutritional approach is warranted. And regardless of conditions, Venture Milling offers commodities at competitive prices.

## Feed That Helps You Succeed

Save time, money and headaches with the variety of economical, high-quality feed options available from Venture Milling, a subsidiary of Perdue.

- **ProvAAAL®** – our premier ruminant protein supplement.
- **Concentrates** – customized protein and mineral blends, precision formulated for your dairy.
- **Complete Feeds** – All your purchased feed ingredients in one convenient economical package.
- **Commodities** – including canola meal, citrus pellets, cottonseed and other grains.
